

08.07.2025

The Chairman,
Airports Economic Regulatory Authority of India,
3rd Floor, Udaan Bhawan, Safdarjung Airport,
New Delhi.

Dear Sir,

Sub: RESPONSE TO CONSULTATION PAPER No. 01/2025-26 DATED 16th JUNE 2025 REGARDING DETERMINATION OF TARIFF FOR FUEL FARM INFRASTRUCTURE AND INTO-PLANE SERVICES AT MANOHAR INTERNATIONAL AIRPORT, MOPA, GOA (GOX) FOR THE FIRST CONTROL PERIOD (1st APRIL 2023 TO 31st MARCH 2028)

We thank the Authority for the release of Consultation Paper No. 01/2025-26 pertaining to the tariff determination for Fuel Farm Infrastructure and Into-Plane Services at Manohar International Airport, Mopa, Goa (Gox) for the First Control Period.

As directed, BPCL has submitted its comments on the Consultation Paper within the stipulated timeline. The detailed responses are enclosed herewith as **Annexure A**.

We respectfully request the Authority to consider our submission while finalizing the FIF and ITP charges, and to issue the Tariff Order at the earliest to enable implementation by 16th July 2025.

Thanking you,

Yours truly,

For M/S Bharat Petroleum Corporation Limited

Sujit Kumar
Chief General Manager – Marketing Aviation

Annexure A

Comments of Bharat Petroleum Corporation Limited (BPCL) on Consultation Paper 01/2025-26 dated 16th June 2025

1. Capital Expenditure – Shifting of Date of Capitalisation for Capex Amounting to ₹33.52 Crores from 31st March 2023 to 29th February 2024

With respect to the shifting of the capitalisation date, the Operator respectfully submits the following:

- (i) The said capital expenditure has been incurred in accordance with **Schedules A to D of the License/Concession Agreement** executed with the Airport Operator, GMR Goa International Airport Limited (GGIAL), and was necessary for enabling operations by the Airport COD.
- (ii) The Operator further submits that capital expenditure amounting to **Rs. 33.52 crores** was duly capitalised as of **31st March 2023**, as indicated in the Multi-Year Tariff Proposal (MYTP) submission. In support of this, an **Auditor's Certificate** evidencing the capitalisation of the assets has been attached for the Authority's reference, as Annexure 1.
- (iii) Of the total capital expenditure of ₹33.52 crores for which the date of capitalisation was shifted on account of the commissioning of the Fuel Hydrant System (FHS) in February 2024, the Operator respectfully submits that only **₹19 crores** relate to the FHS component commissioned in that month. The balance **₹14.52 crores** pertain to assets for which the Operator has commissioned and made the necessary applications to the statutory authorities **prior to 31st March 2023**. The relevant approval letters from the DGCA are enclosed herewith for the Authority's reference Annexure 2.
- (iv) With reference to the FHS component, the Operator would like to highlight that while the assets were ready to use by the **Airport COD**, we were awaiting the statutory approvals before commissioning FHS.

In light of the above, the Operator respectfully requests the Authority to consider the **date of capitalisation of assets amounting to ₹33.52 crores** as submitted in the MYTP proposal as the same was ready to be put to use. This includes **assets amounting to ₹14.52 crores**, for which application for statutory approvals was duly submitted prior to **31st March 2023**.

The Operator further requests that the **Return on RAB and ARR** be determined for the period from the **Airport COD up to 31st March 2023**, in line with the capitalisation reflected in the audited books of account.

2. Fair Rate of Return: Gearing Ratio of 48:52

It is observed that the Airports Economic Regulatory Authority of India (AERA) has applied a normative gearing (debt-to-equity) ratio of 48:52 for the determination of tariff for the First Control Period. In this regard, the Operator respectfully submits the following for the Authority's consideration:

(i) Internal Financing Policy of BPCL

Bharat Petroleum Corporation Limited (BPCL), being a publicly listed entity, adheres to its internal Capital Budget Guidelines which govern the financing of projects undertaken by the company in a financially prudent manner. As per the said guidelines, projects with a capital outlay of less than ₹100 crore are to be financed entirely through internal accruals, with no provision for external borrowings. Given that the Operator's investment in the Mopa (Goa) Fuel Farm falls below the ₹100 crore threshold, no debt has been availed for the said project.

(ii) Inapplicability of Comparative Gearing Ratios

The normative gearing ratio of 48:52 appears to have been derived from a study undertaken by AERA in relation to other airport operators, notably Bangalore International Airport Limited (BIAL) and Cochin International Airport Limited (CIAL). That study referenced benchmarks from foreign airports considered comparable to BIAL and CIAL, in addition to infrastructure companies operating in capital-intensive sectors, in order to arrive at the normative gearing. However, such benchmarks are not appropriate or directly applicable to the Operator, whose business model, capital structure, and scale of capital expenditure differ significantly. Unlike the aforementioned comparators, the Operator does not undertake projects of similar capital intensity and, accordingly, has no requirement to raise debt of a comparable magnitude. Applying the same gearing ratio to the Operator, therefore, lacks parity and does not reflect the financial realities or prudent financing practices adopted by the Operator. As such, the adoption of a 48:52 gearing ratio in the present case would be neither reasonable nor equitable.

(iii) Precedents of Actual Gearing Considered for Similar Entities

It is further submitted that AERA has, in prior determinations, considered actual gearing ratios for other Independent Service Providers (ISPs) at various airports, irrespective of whether the funding was entirely equity-based or a mix of debt and equity. For instance, AERA considered an actual gearing of 0:100 for the Fuel Farm operator at BIAL during the final two years of the Third Control Period (refer Table 34 of Order No. 30/2021-22). These determinations indicate a precedent of considering actual capital structure for ISPs.

In view of the above, the Operator respectfully urges the Authority to adopt a consistent and fair approach by considering the actual gearing ratio for the purpose of computing the Fair Rate of Return (FRoR) for the First Control Period.

3. **Security Deposit: Return @5%**

The Operator respectfully submits the following in relation to the Authority's decision to allow only a nominal return of 5% on the Security Deposit placed with the Airport Operator:

(i) **Nature and Treatment of Security Deposit**

The Security Deposit was a mandatory precondition for the award of Fuel Farm operations at Mopa Airport. Accordingly, it represents a blocked capital amount and is not available to the Operator for deployment in capital expenditure or operational purposes. Had this amount been utilised towards capital expenditure, the Operator would have earned a return at the rate of the Fair Rate of Return (FRoR) applicable to the project. Even if retained as a fixed deposit, the Operator would have earned a return aligned with prevailing fixed deposit interest rates. Therefore, restricting the return on such a significant locked-in capital to a nominal 5% does not reflect the opportunity cost of funds or the commercial realities faced by the Operator.

(ii) **Precedent in Other AERA Tariff Orders**

It is further submitted that while the Authority has considered only a nominal return for the present case, it has allowed a higher return on refundable security deposits in other airport tariff determinations. Specifically, AERA has treated security deposits as a form of debt capital while computing the weighted average cost of capital (WACC) or return for airport operators, in alignment with the judgment of the Telecom Disputes Settlement and Appellate Tribunal (TDSAT) in the case of Delhi International Airport Limited (DIAL).

Relevant excerpts from past Orders are as follows:

- **DIAL – Third Control Period (Order No. 57/2020-21)**

Para 1.3.1 (vii):

“Refundable Security Deposit (RSD) raised by the airport operator to fund the Project cannot be a zero-cost debt. Its cost needs to be ascertained and made available to the airport operator through appropriate fiscal exercise at the time of next tariff redetermination.”

Para 3.3.12:

“Authority proposed to consider return on RSD as equivalent to the cost of debt... consistent with the proposal... regarding true-up of WACC for the First Control Period...”

Para 3.3.18:

“Authority... is of the view that the airport users benefitted from zero-cost financing that DIAL was able to raise from Non-Transfer Assets... Accordingly, the Authority has decided to consider the cost of RSD as equivalent to the actual cost of debt at 9.28% for the Second Control Period...”

- **CIAL – Third Control Period (Order No. 08/2021-22)**

Para 7.2.7:

“Since the RSD of INR 150 crores deposited by the fuel farm operator was utilised by CIAL for the creation of assets, the Authority proposed to provide a return on RSD at the cost of debt in line with the judgment of TDSAT in the case of DIAL.”

Para 7.2.8:

“As refundable security deposits are treated as debt, they were effectively included in the notional gearing ratio of 48% and hence did not require any separate treatment.”

These precedents affirm the principle that Security Deposits, when locked and not available for use by the operator, warrant a return commensurate with the cost of debt.

In view of the above submissions and consistent with the Authority’s past practice and the jurisprudence established by TDSAT, the Operator respectfully requests that the return on the Security Deposit be allowed at the prevailing cost of debt. Specifically, the Operator proposes that such return be determined based on the one-year Marginal Cost of Funds based Lending Rate (MCLR) of the State Bank of India, as has been adopted by the Authority in other tariff orders for computing the notional cost of debt.

4. Fuel Throughput – Revision of Projections for the First Control Period

The Operator respectfully submits that the actual fuel throughput for FY 2024-25 was **85,221 KL**, as against the originally projected volume of **1,12,444 KL** submitted in the MYTP. Furthermore, based on actuals available up to Q1 of FY 2025-26, the revised fuel throughput projections for the remaining years of the First Control Period are as follows:

Particulars (in KL)	FY 24	FY 25	FY 26	FY 27	FY 28
As per MYTP Submission	86,561	1,12,444	1,31,377	1,49,618	1,57,099
Based on Actuals up to Q1 FY 2025-26	86,561	85,221	92,465	1,00,093	1,08,601

In light of the significant variance between the projected and actual volumes, and to ensure accurate and fair tariff determination, the Operator requests that the Authority consider the revised fuel throughput figures presented above for the purpose of finalising the tariff for the First Control Period.

Details of Actual Fuel Throughput for the first 3 months of FY 25-26 are as given below:

Particulars	April 2025	May 2025	June 2025
Fuel Throughput (KL)	6265	7348	6401

5. First Control Period Capital Expenditure – Reduction in Cost of Constructing the First Floor

In relation to the reduction in the cost of constructing the first floor from ₹1.72 crores to ₹1.58 crores, it is observed that the Authority has applied Project Management Consultancy (PMC) and Contingency charges at the rate of 5% and 3%, respectively, as against the Operator’s submission of 7% and 10%. The Operator respectfully submits that these components form

part of the actual project cost incurred in line with standard industry practice and internal cost approval processes.

Accordingly, the Operator requests that the Authority undertake a true-up of the capital expenditure, including PMC and Contingency, based on actual expenditure incurred during the First Control Period, at the time of tariff determination for the next Control Period.

6. Deadstock – Exclusion from Regulatory Asset Base (RAB) and Nominal Return of 5% on Capital Expenditure

The Operator respectfully submits that the Authority's decision to exclude the cost of Deadstock from the Regulatory Asset Base (RAB) and to allow only a nominal return of 5% on the capital expenditure incurred is inconsistent with the Authority's own precedents and established regulatory treatment in similar cases concerning fuel farm operators at other airports.

Specifically, in Second Control Period Order No. 32/2017-18 for DAFFPL, the Authority undertook a detailed analysis of the treatment of Deadstock and concluded that Deadstock should be considered as part of the RAB, with no depreciation applied. The relevant extracts from the said order are reproduced below for reference:

Para 4.7:

"The Authority noted that certain minimum level of fuel ('Deadstock') is to be stored in fuel storage tanks at all times for uninterrupted operation of the fuel farm. There are two possible accounting treatments for the cost of Deadstock as observed in the case of other fuel farms:

4.7.1 Deadstock is treated as a depreciable capital asset: Cost of Deadstock is added to the capital asset (storage tank/pipeline) cost and depreciated at the applicable rate.

4.7.2 Deadstock is treated as a non-depreciable asset: Cost of Deadstock is accounted for as a separate capital asset ('Deadstock') and not depreciated, since its residual value may not fall below 5% of the original cost, in accordance with the provisions of the Companies Act, 2013."

Para 4.8:

"The Authority, in this regard, has proposed to treat Deadstock as a non-depreciable asset and consider appropriate adjustment in tariff at the time of disposal of such Deadstock in the last control period, based on the concession period of the fuel farm operator."

It is thus evident that AERA has previously acknowledged that Deadstock constitutes a necessary and permanent operational requirement, warranting its inclusion in the RAB, albeit without depreciation.

Furthermore, the Operator submits that the cost of procuring and maintaining Deadstock is an upfront capital expenditure borne by the Operator, with the underlying objective of ensuring uninterrupted fuel farm operations. Accordingly, in line with established regulatory principles and AERA's past decisions, the Operator should be allowed a return on this investment at the Fair Rate of Return (FRoR), rather than a nominal return. The FRoR is intended to fairly compensate regulated entities for capital investments made and to incentivise continued investment in infrastructure and operational efficiency.

In view of the foregoing, the Operator respectfully requests the Authority to:

- Consider the cost of Deadstock as part of the Regulatory Asset Base (RAB), consistent with its own decision in Order No. 32/2017-18 and other relevant tariff orders; and
- Allow a return on such capital expenditure at the applicable FRoR, rather than a nominal rate of 5%, to reflect the actual cost and operational necessity of maintaining Deadstock.

7. First Control Period – Operation & Maintenance Expenses

The Operator respectfully requests that the Authority undertake a true-up of the Operation and Maintenance (O&M) expenses based on the actual expenditure incurred, at the time of tariff determination for the next Control Period. This would ensure alignment with the principle of cost-reflective tariff determination and maintain regulatory consistency.

To,
Airports economic regulatory authority of India
Aera building, Administrative office,
Safdarjung Airport,
New Delhi – 110003

We hereby certify the Fixed Asset Register for Bharat Petroleum Corporation Limited (BPCL)-MOPA Goa, Aviation Business Unit. Enclosed is the Fixed Asset register of the BPCL-MOPA Goa Aviation business unit as Annexure-I to this certificate.

This certificate is issued on the request of Bharat Petroleum Corporation Limited and on the basis of data provided to us.
